

SouthBay Fuel Injectors Installation Instructions

Bosch D3 Fuel Injectors with Adapter

■ WARNING / IMPORTANT

Always lubricate the injector O-rings before installation. Dish soap or suitable lubricant can be used. Failure to lubricate may cause damage or fuel leaks.

Install the injectors into the **INTAKE MANIFOLD FIRST** and then into the fuel rail. This prevents leaks and ensures proper sealing.

■ INSTALLATION STEPS

Step 1: Apply lubricant to all injector O-rings.

Step 2: Insert each injector into the intake manifold.

Step 3: Ensure injectors are fully seated and straight.

Step 4: Install the fuel rail carefully onto the injectors.

Step 5: Apply even pressure to seat the fuel rail properly.

Step 6: Verify all injectors are secure.

Step 7: Check for leaks after installation.

■ NOTE

These injectors may not use retaining clips. Fuel rail pressure holds them securely in place.
